

HOW TO OPTIMIZE THE BACKUP OF YOUR VIRTUAL ENVIRONMENTS

Virtualization - heralded for its cost reduction, IT optimization and energy efficiency - presents new risks and challenges to your data backup.

The added complexity in virtualized environments makes it easier to overload both virtual machines and physical machines, and without application consistency, the risk of data loss is real.

Join Vital Support Systems on Tuesday, Sept. 14th to learn how to optimize the backup of your virtual environments.

You will learn how to achieve:

- * Application backups in VMware environments while guaranteeing the ability to do data recovery and not overload your physical servers - and at the same time reduce costs.
- * Zero Downtime Backup/Instant Recovery
- * Secure backups using encryption
- * Complete application consistency

You'll also learn how HP Data Protector helps you simplify the management of backup recovery in a virtualized environment with eight methods of backup/recovery and no scripting necessary!

Seating is limited! Register today!

And, all attendees will receive an Apple iPod Shuffle!!

How to Optimize the Backup of Your Virtual Environments

DATE:

Tuesday, September 14, 2010

TIME:

11 a.m. - Registration

11:15 a.m. - 2:30 p.m. - Event

LOCATION:

Vital Support Systems Office
11191 Aurora Avenue Bldg. 4
Urbandale, IA 50322
LUNCH INCLUDED!

ALL ATTENDEES WILL
RECEIVE AN APPLE
IPOD SHUFFLE!
