

You're Invited to Attend One of Three Lunch and Learns Brought to you by Vital Support Systems & VMware

How To Instrument the Virtual Environment

Virtualization management products from VMware elevate IT management to what matters most – service levels – and allow IT to respond to specific business needs more quickly. The new vCenter products now available help automate and simplify management of the internal cloud. Attend one of these three lunch and learns to learn more about **VMware vCenter Lifecycle Manager, vCenter Lab Manager and vCenter Orchestrator**

vCenter Lifecycle Manager: helps IT administrators deploy virtual infrastructure more broadly, gain more control and visibility, and optimize resource utilization for greater ROI.

vCenter Lab Manager: provides on-demand access and automated management of the internal cloud for dev/test, enabling higher service levels and simplified IT administration.

vCenter Orchestrator: allows administrators to capture their best practices and turn them into automated workflows.
